

Wild flower garden

Last year, we planted loads of flowers in our school's garden. We were very proud of how it turned out. There are loads of beautiful flowers in the garden including bluebells, snowdrops, daffodils and tulips.

Our aim this year is to help our native animals and plants. We hope by the end of this newsletter you will help us to save our planet from climate change.

Habitat Map

Last year 5th and 6th class made a school habitat map. This year we are making a new habitat map but we are making a few new additions. We will be adding in the log pile, our leaf pile and our hedgehog tunnel. We are already half way through it, it looks amazing so far.

River Dinin

Last May, we went down to the River Dinin to study different species of fish. We found a Freshwater Limpet, a Stonefly Nymph, a Water Stick Insect and a Water Mite. It was great fun all the same we were learning.

Insect habitats

Last year in our school, we made animal habitats, we built a log pile, a leaf pile, a hedgehog tunnel and we also put up bird feeders.

They all were a huge success. We attracted loads of different species of insects. This year we also hope to build a mini pond in the school grounds.
