

LISNAFUNCHIN GREEN-SCHOOL NEWSLETTER

Introduction

This is Lisnafunchin's Green School's newsletter and we will tell you all the things we have done during the past year. Now we will tell you what biodiversity is about. Biodiversity is all about animals and plants, helping each other to do certain things. For example, the worm helps most birds to live by being food for them but also it helps plants to grow, by improving the soil.

Saving animals from extinction

We think that it is important to save animals and plants from extinction because they keep nature in balance. Also future generations would want to learn about and see them. We think that if we all do our part we can keep all species alive and discover more.

Apple trees

We planted lots of trees this year such as apple trees, a cox's orange tree, a gooseberry tree.

Bees

A beekeeper called Mark came in and told us about several types of bees and what they do to help our world. He brought in a bee hive and told us what types of bees would be in there. He brought us outside and told us to collect insects around the school. We collected a lot of insects such as the woodlouse, the wasp and stick insect.

Trees

Studying trees is really important because then we know how to preserve them. Trees were brought to Ireland when the Ice Age ended. Seeds were brought by animals across the land bridges. In our school we found Oak, Alder, Ash, Silver Birch and Sycamore trees.

Bird feeders

This year we have put up bird feeders. We have decided to put up bird feeders because we have seen a lot of birds like the the robin robin who have no
